

COLOURED RENDER

by **ROCKCOTE**

Lasting beauty and performance
without the need for painting

High performance Coloured Render by Rockcote

The advantage of Rockcote Coloured Render lies in its rich, full colour that permeates the entire render layer, delivering depth and vibrancy that lasts. Rockcote Coloured Render systems can be tailored to suit your substrate and desired aesthetic.

Designed to be used as part of a complete Rockcote System, each component is carefully formulated to perform optimally in Australian conditions and on Australian buildings. Our systems work together to create a cohesive, long-lasting finish that enhances and protects your exterior.

Made from pure acrylic, Rockcote Coloured Renders offer a timeless, natural finish that painted surfaces simply can't match.

Protection for your building

Rockcote Coloured Renders provide a tough, flexible, and water-resistant finish that's built to endure the Australian climate. Up to 20 times thicker than standard paint and formulated with powerful mould and fungus inhibitors, they offer a durable and distinctive finish, without the need for painting.

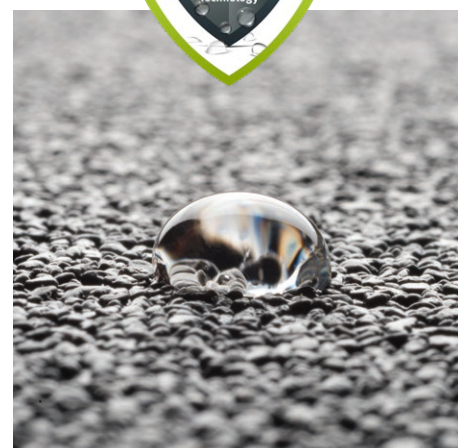

Because coating systems need to accommodate minor movement, our Coloured Renders are designed with superior flexibility and offer up to four times the crack-bridging capability of standard exterior paint. This helps minimise the appearance of surface cracks and maintain the integrity of your finish over time.

Why choose Coloured Render by Rockcote?

- Integrated colour hides scratches and minor damage
- Consistent, seamless finish across most substrates (excluding weatherboard)
- No need to paint – long-lasting protection and beauty
- Enhances street appeal and adds value
- A more natural aesthetic than painted finishes
- Protects and extends the life of your substrate

Hydratech Technology

Hydratech is Rockcote's advanced water-repellent technology, built into the formulation of selected Coloured Renders. Unlike traditional coatings that rely on surface sealers, Hydratech makes the render itself hydrophobic, delivering long-term protection without compromising breathability. This technology helps preserve the look and performance of your finish, even in harsh weather conditions.

Sandcote Hydratech

Coloured Render
with Water Repellent
Technology.

Rockcote Sandcote Hydratech is a natural, textured render enhanced with advanced water repellent technology built into the coating. Featuring mineral sands and aggregates for a modern finish, it delivers lasting water resistance without the need for an additional sealer.

Sandcote Hydratech Fine

Refined texture with
Water Repellent
Protection.

Rockcote Sandcote Hydratech Fine delivers a smoother, more uniform finish with the same trusted water repellency of the Hydratech range. Sitting between Sandcote Hydratech and Finecote, it offers subtle texture and a polished, modern aesthetic for premium projects.

Sandcote

Elegance with a natural
sparkle.

Rockcote Sandcote is the ideal finish for premium homes where a high-quality, exterior render is required. This elegant, mineral-based finish delivers a smooth and natural look, enhanced with the subtle sparkle of fine sands. With superior flexibility and durability, Sandcote is low maintenance and helps bridge minor cracking in the substrate for a long-lasting, beautiful exterior.

Santa Fe Hydratech

Timeless texture, modern performance.

A classic favourite, reimagined. Rockcote Santa Fe Hydratech revives the rustic charm of traditional earthen finishes with a modern upgrade. Its distinctive, undulating texture brings depth, warmth and character to any exterior, making it perfect for coastal homes, country builds or Mediterranean-inspired architecture.

Now formulated with Rockcote's advanced Hydratech water-repellent technology, Santa Fe Hydratech offers the authentic, tactile feel of a natural render, with enhanced durability and long-term weather protection built in. It's a timeless finish, ready for today's environments.

Cerano

Concrete-inspired finishes for interiors and exteriors.

Bring your design vision to life with Rockcote Cerano, the perfect solution for achieving modern, concrete-look finishes across a variety of surfaces. Whether you prefer a smooth or low-lustre aesthetic, Cerano delivers full, rich colour in a tough, flexible acrylic formulation. When paired with Rockcote Repel, it offers enhanced water-repellent protection. Highly versatile, Cerano is ideal for feature walls or architectural finishes, inside or out.

Santini

Rugged, hand-crafted bagged finish.

Inspired by traditional stucco, Rockcote Santini features a dense, heavily textured finish that adds depth and handcrafted appeal. Applied with a large brush or mitt, Santini creates a distinctive bagged effect reminiscent of Spanish villas and classic European exteriors.

As Rockcote's coarsest Coloured Render, it offers a more open texture than Sandcote or Finecote, with a larger sand profile than Quicksand Coarse.

Finecote Hydratech

A classic finish with refined texture.

Rockcote Finecote Hydratech is a premium acrylic-based fine texture coating that delivers a seamless, fine-grain render with a soft, natural appearance. Enhanced with light-reflective luminescent sand, it creates a subtle shimmer that changes with the light.

Formulated with Rockcote Hydratech technology, it improves water repellency, reduces the need for additional sealing coats, and provides long-term exterior protection with excellent adhesion and durability.

Quicksand Coarse

A rustic texture with natural character.

Rockcote Quicksand Coarse brings boldness and texture to any project, offering a rugged yet refined look. With jagged aggregates and a coarse profile, it adds striking visual interest while maintaining a smoother touch compared to Santini. It's ideal for designers and homeowners seeking a stronger, more rustic texture without compromising on finish quality.

Toscani

Create a lime wash-style finish.

Rockcote Toscani is a sand-based texture paint designed to replicate the beauty of lime wash finishes. Applied by roller or brush in a crosshatch pattern, it creates a soft, rustic aesthetic. Additional colours can be blended during the finishing process to produce a unique, aged patina. Toscani is 100% acrylic, offering excellent durability and flexibility.

Colours

Tint to match your vision.

Rockcote Coloured Renders can be tinted to match colours from any major paint brand. Please note that some colours and substrates may absorb more heat than others.

Substrates like Fibre Cement Sheeting (FCS) and Expanded Polystyrene (EPS) have specific colour limitations due to thermal expansion and contraction. Always consult Rockcote for guidance when selecting colours for these substrates.

Samples

Order your Coloured Render samples.

Explore our Coloured Render range with ease by ordering samples directly from Rockcote. Simply select the colours and finishes you're interested in, and we'll send you small sample boards to help you visualise the perfect finish for your project. Whether you're planning a new build, renovation, or design update, our samples make it simple to choose the ideal colour and texture for your space.
