

“Like water off a duck’s back, except you can’t see the feathers.”

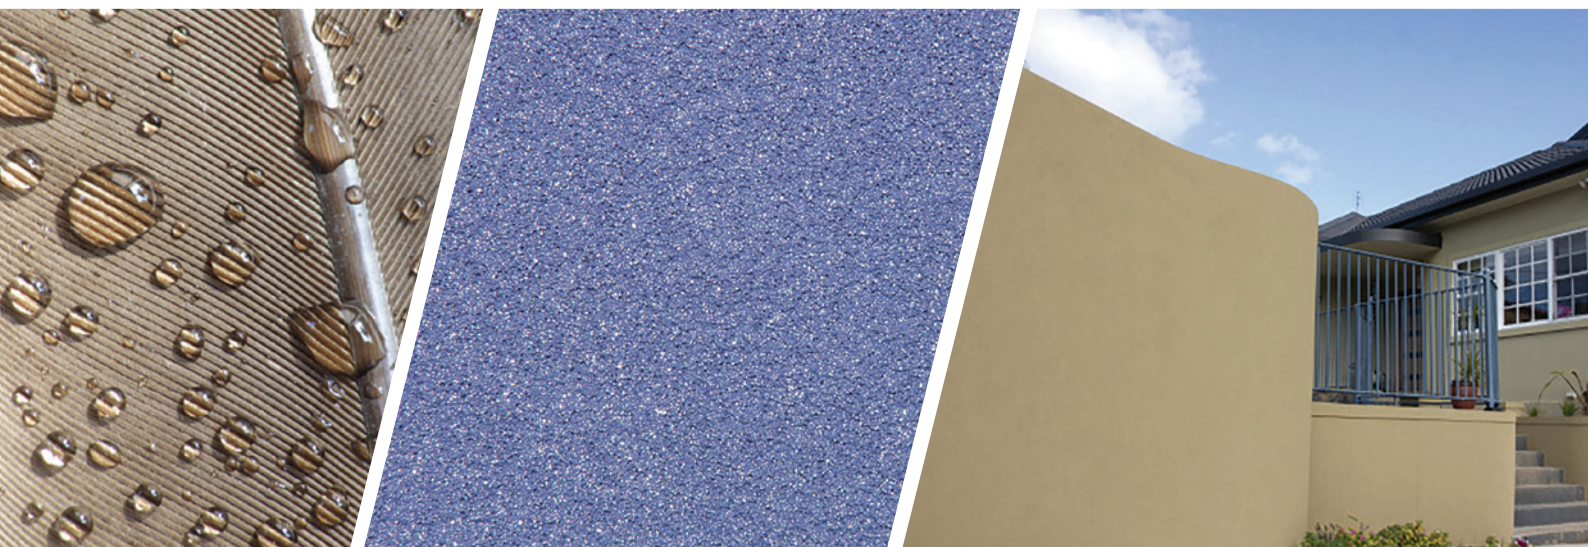

— Bob Cameron, CEO Rockcote.

About Repel

- › A silicone-infused surface treatment with a **near invisible** matt finish.
- › Ideal for enhancing the **Rockcote Coloured Render Systems** and even protecting historic stone buildings when texture and aesthetics cannot be altered.
- › Blended with acrylic to enable subsequent property owners to apply paint on top should they wish to (although we, like many, prefer the natural look).

Key Benefits

- › Retains the natural look and breathability of **Rockcote Coloured Render**.
- › Improves water repellency and resistance without ‘sealing’ the surface, so **Rockcote Coloured Render** retains its vapour permeability. (Also an ideal enhancement to clay renders and straw bale homes where breathability is key.)
- › Enhances **resistance** to mould and grime pick-up, and makes **Coloured Render** even easier to clean and maintain.

Repel is the ideal protective finish for **interior** and **exterior surfaces**. Water based, easy to use and low maintenance, **Repel** provides **long-term protection** while maintaining the stunning natural aesthetic of **Rockcote Coloured Render Systems**.

Repel & Rockcote Coloured Render Systems

Rockcote Coloured Render Systems:

- › **Rockcote Coloured Render Systems** bring the art, romance and skills of the past to modern Australian architecture and building design.
- › A **highly durable, water-repellent, breathable and weather-resistant finish** combining rich colours with stunning, mood-altering textures.
- › Inspired by natural-material aesthetics and the **quality of ancient arts and artisan.**

Repel: An Optional Enhancement to Coloured Render Systems

- › Enhancing **Rockcote Coloured Render Systems** with **Repel** is easy, and doesn't change the look, feel and vapour permeability of the system.
- › **Repel** is perfect for those who really want their property to retain a natural-looking aesthetic.
