

COLOURED RENDER

by **ROCKCOTE**

Lasting beauty and performance
without the need for painting

Product used: Rockcote Finecote

High performance Coloured Render by Rockcote

The advantage of Rockcote Coloured Render is the depth of colour that permeates the entire render layer maintaining a rich, full colour for exterior walls. Rockcote Coloured Render systems can be tailored to your substrate and desired aesthetics.

Coloured Renders by Rockcote are designed for use as part of a complete Rockcote Systems. Each component has been formulated by Rockcote to work optimally in Australian conditions on Australian buildings. Our products go great together, resulting in a long-lasting finish that effectively protects the substrate.

Pure acrylic, Coloured Renders offer a timeless and beautiful quality that painted surfaces simply cannot achieve.

Protection for your building

Coloured Renders by Rockcote deliver a tough, flexible and water resistant finish with long-term exterior protection, designed for Australian conditions.

With the inclusion of powerful mould and fungus inhibitors, and up to 20 times thicker than a standard paint, our Coloured Renders provide a distinctive and durable finish without the need for painting.

Coating systems need to be able to accommodate minor movement to prevent cracking and damage. Coloured Renders by Rockcote are highly flexible, and with four times the crack-bridging capability of standard exterior paint, help to mitigate visible cracking on the exterior surface.

Why choose Coloured Render by Rockcote?

- › The integrated colour permeates the render layer making scratches and damage less noticeable – 20 times thicker than paint.
- › Consistent, seamless finish across the house regardless of the substrate (excluding weatherboard)
- › Add value and street appeal
- › No need to paint
- › A more natural aesthetic than painted finishes
- › Protect your substrate

Sandcote HYDRATECH

Coloured Render with Water Repellent Technology

Rockcote Sandcote HYDRATECH is the next level of Sandcote with advanced water repellent technology embedded into the chemical composition of the coating, delivering a hydrophobic system. It is an attractive and natural coloured render that uses the inherent beauty of mineral sands and aggregates to produce a natural, but stylishly modern texture finish. Sandcote HYDRATECH has been designed as a coloured render that delivers water repellency, without the need to overcoat with Rockcote Repel.

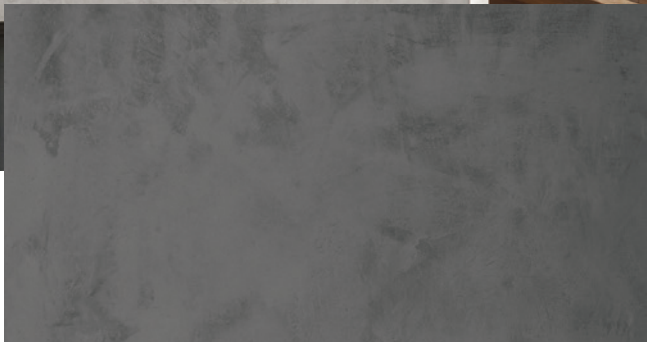

Sandcote

Elegance with a natural sparkle.

Rockcote Sandcote is the ideal finish for quality homes where the very best exterior rendered finish is required. Sandcote delivers an elegant and pristine rendered look, catering to those who are searching for a smooth and natural look for the exterior of buildings. Superior quality and flexibility mean that the product is low maintenance and bridges minor cracking in the substrate.

Applicator: Trend Rendering

Cerano

Create concrete look finishes for interiors or exteriors.

Bring your design ideas to life with Rockcote Cerano for a smooth or low lustre finish, ideal for creating the on trend concrete look over a variety of substrates.

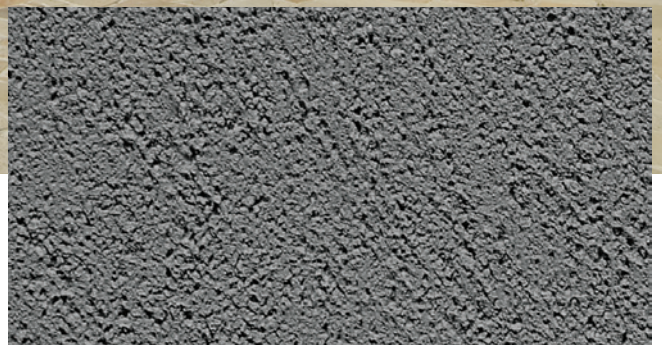

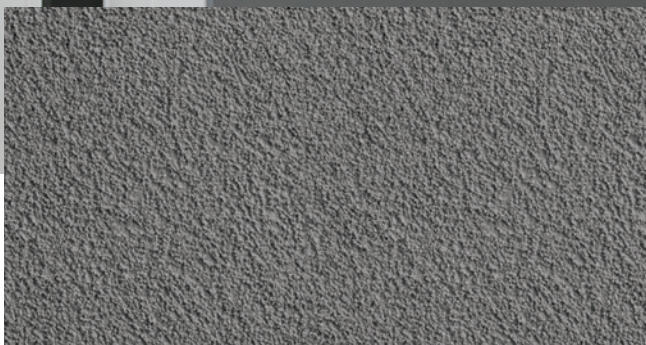

Rockcote Cerano delivers the exceptional performance of our acrylic Coloured Renders: it's tough and flexible with a durable finish and full, rich colour and combined with Rockcote Repel will give you a hydrophobic protection (water repellent).

Highly versatile, Cerano is ideal for introducing different textures or finishes to interior or exterior walls or feature areas.

Finecote

Create a classic render finish with Finecote.

The fine texture is brought to life by light reflective particles of luminescent sand contained in the formula. Finecote allows you to create a consistent, seamless and natural looking finish. Rockcote Finecote is a popular finish for architecturally designed homes and residences in opulent urban areas where a sophisticated, timeless look is sought.

Quicksand Coarse

A rustic texture with character.

Rockcote Quicksand Coarse has drama and character that will appeal to anyone seeking a sharper, more rustic element with jagged aggregates to give an attractive coarse texture finish. Due to the type of application and finishing techniques, Rockcote Quicksand Coarse delivers a more consistent finish and is smoother to the touch than Santini.

Santini

Rugged, hand-crafted bagged finish.

Drawing inspiration from traditional stucco, Rockcote Santini's dense texture and higher build delivers a more rugged look. This versatile product can be used to achieve a wide range of finishes through different application techniques. Known for its heavy bagged finish reminiscent of a Spanish villa,

Santini can be applied with a large brush or mitt.

Santini is Rockcote's coarsest Coloured Render option, presenting a more open texture than Sandcote or Finecote and larger sand profile than Quicksand Coarse.

Toscani

Create a lime wash style finish.

Rockcote Toscani is a sand-based texture paint that can be left off the roller or crosshatched using a brush to achieve a subtle lime wash style finish. Additional colours can be blended in during finishing to achieve an attractive patina finish, if required. Rockcote Toscani is 100% acrylic and offers excellent flexibility and durability.

Colours

Select your colour from any company's colour range and Rockcote Coloured Render can be tinted to match.

Note that some substrates and colours will absorb more heat. Substrates such as Fibre Cement Sheeting (FCS) & Expanded Polystyrene (EPS) have colour restrictions due to thermal expansion and contraction caused by their response to heat.

Product used: Rockcote Finecote & Cerano (two toned). Applicator: Trend Rendering
